HIQA Recommendations 2014

PeHealth Ireland

- 1) SNOMED CT should be **adopted** as a national clinical terminology for Ireland immediately.
- 2) A SNOMED CT National license should be **purchased** and the resourcing and functioning of a national release centre for Ireland should commence in 2015.
- 3) The feasibility of entering into an **agreement** with a SNOMED CT national release centre in another jurisdiction should be investigated in order to provide support in the short-term (early stages of operation of SNOMED CT in Ireland).
- 4) SNOMED CT should be introduced gradually on a project-by-project basis with the active support of the SNOMED CT National Release Centre.
- 5) In order to future proof information communication technology (ICT) investment, the requirement to support SNOMED CT should be included in all relevant software procurements from now on.
- 6) A review should be undertaken to determine the most appropriate agency to establish and operate the SNOMED CT National Release Centre

What is **SNOMED**?

- SNOMED CT is a terminological resource that can be implemented in software applications to represent clinically relevant information reliably and reproducibly thus
 - providing standardised way to represent clinical information
 - improving our ability to code, retrieve, and analyse clinical data
- SNOMED CT
 - the most comprehensive clinical terminology available internationally
 - organised in 19 hierarchies such as diseases, symptoms, procedures
 - composed of concepts, descriptions and relationships
 - extensive

0

- 293,000 concepts
- - 765,000 descriptions
- - 830,000 relationships

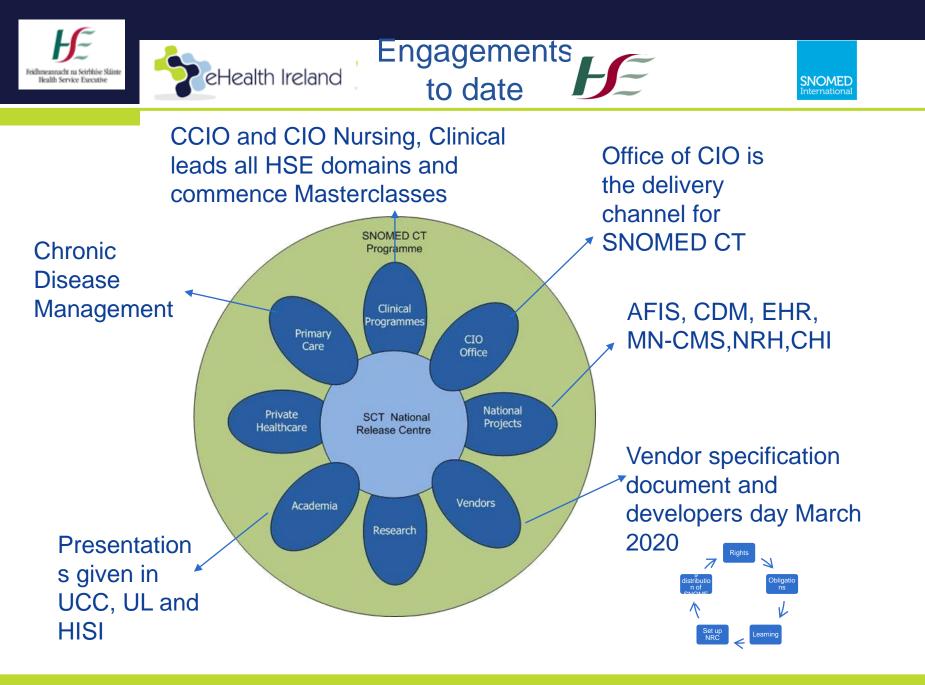

Irish NRC

Establishing the NRC is similar to establishing a franchise "knowledge, processes, and trademarks"

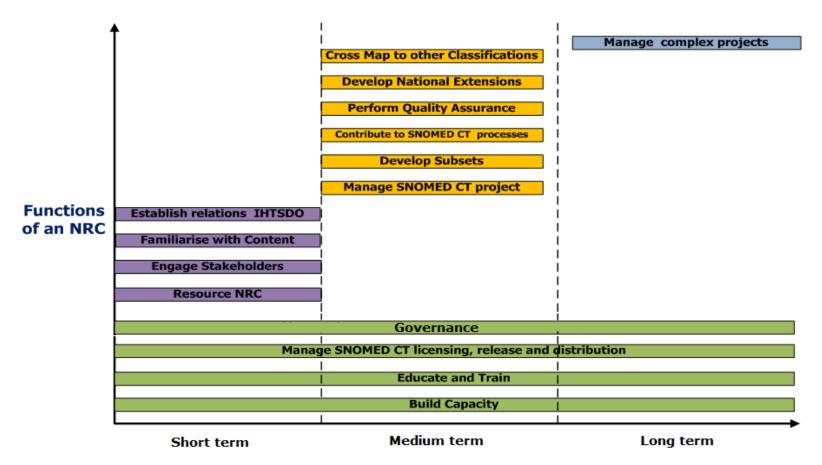

Implementation of a National Release Centre

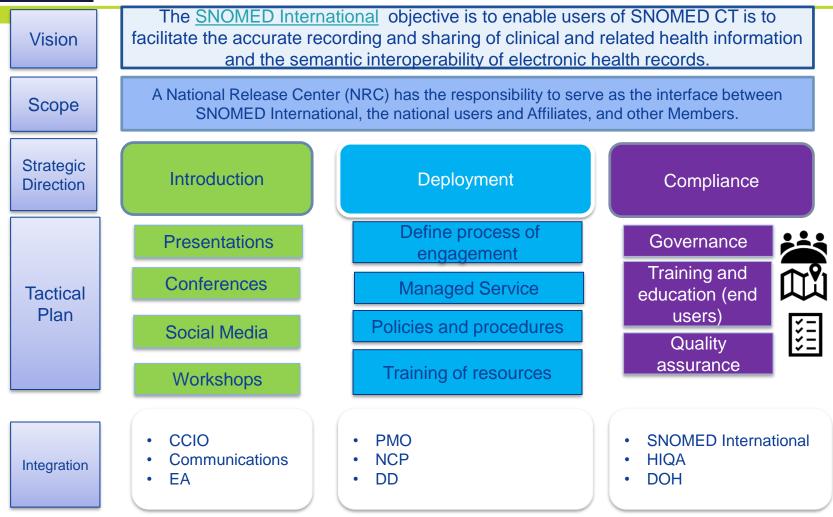

General Assembly –is the highest authority in SNOMED International and contains one representative from each member country They can make binding decisions on budgets, work plans and strategic goals

Twice yearly face to face meetings

Member Forum rep-acts as an advisory body to the Management board and facilitates point of contact for all stakeholders Optimizes the collaboration and coordination among member countries Facilitates contact and communication between countries with similar foundations/needs Can raise issues of concern to management board Key player in which work items should be priortized Twice yearly face to face meetings

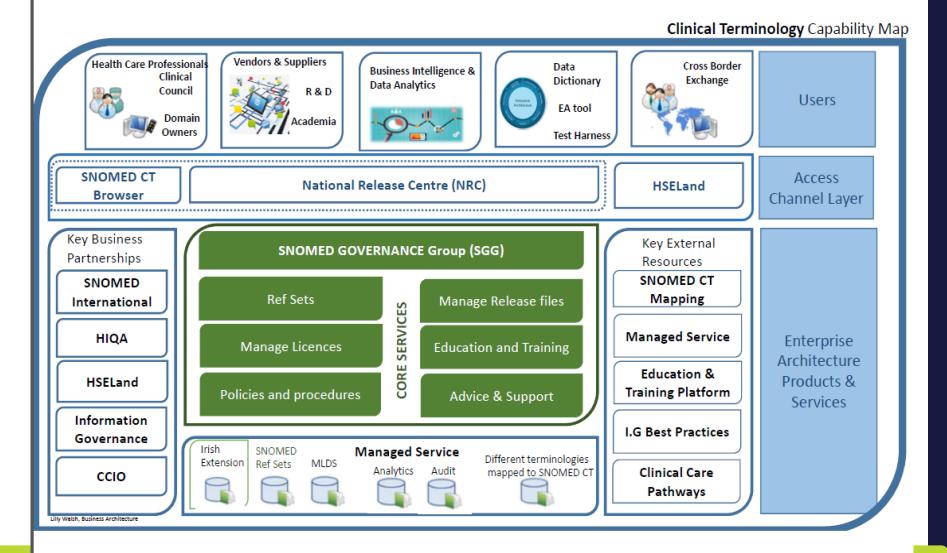

Strategic deployment

Capability Map

Clinicans role /Office of CIO role

Having all our healthcare information on computers will improve everything?

- SNOMED CT is the clinical terminology that will record, retrieve, and help us to analyse our patient information for better patient outcomes
- This needs to be configured for our systems with our clinical leads deciding what clinical terms are in our systems

Ensure Vendor specification document included in all clinical system procurements Ensure clinicans are aware of requirement to engage with NRC

SNOMED International SNOMED CT Browser

SNOMED CT Statistics - International Edition

The SNOMED International SNOMED CT Browser provides ways to browse and search SNOMED CT. The browser has been implemented as part of development within the SNOMED International Open Tooling Framework, by the SNOMED International and its development partners

The Browser is provided by SNOMED International to anyone for reference purposes. The interface and REST APIs are **not** to be used as part of production systems in health care settings.

Any abuse of the REST APIs will result in the offending IP address being banned from accessing the browser.

Please provide any feedback on the browser by clicking on the feedback button at the top of the page. Your feedback is essential to the evolution and improvement of this service. Please visit the SNOMED CT Content Request Service to provide content feedback.

This site has been optimized for the Google Chrome browser and it will not work with Internet Explorer. If you do not have access to Chrome, please visit the IE compatibility version here

- Software Development Advisory Group
- Tooling Advisory Group

- Role of an advisory group
- SNOMED International has seven Advisory Groups (AGs) that conduct specific activities that contribute to the fulfillment of the Management Team's responsibilities and the organization's mandate.
- The Advisory Groups are chaired by Management Team members and are agile in nature, given the changing needs and direction of the organization.
- At the beginning of each year, each Advisory Group develops a group work plan outline, determines whether Task and Finish sub-groups are required, outlines any resource requirements, and lays out a set of criteria in order to measure the progress of the applicable group work plan.

Clinical Engagement strategy

SNOMED International Clinical Engagement strategy sets out the organisations approach to engaging with clinicians and clinical groups. It provides a framework for engagement activities, and details how clinical input will be provided to ensure that SNOMED CT meets the requirement of clinicians, and remains clinically relevant in the changing face of healthcare.

VISION -

- To ensure that all activities of the SNOMED International are influenced by global clinical communities
- SNOMED International's culture has a progressive and sustainable approach to engaging clinicians

Access strategy here Clinical Engagement

WELCOME

· Why is your opinion important to us?

As a clinical terminology, it is essential that SNOMED CT has input from clinicians to ensure that it remains relevant and up to date with the ever changing face of healthcare. Your opinion as clinicians is therefore essential to us to highlight the necessary changes and updates required, and advise us on content and products e.g.subsets which can be provided to support the implementation of SNOMED CT.

· The evolution of clinical engagement

SNOMED CT has always had input from clinical groups throughout its history. Historically, this has been provided through special interest groups (SIG's), groups dedicated to specific clinical areas. The groups have been successful, but have been limited in their number of specialties covered; Dentistry, Nursing, Pathology and Laboratory medicine, Anaesthesia, Family/General Practice, Pharmacy. In addition to the clinical SIG's, there were two functional SIG's covering Mapping and Implementation.

Clinical Engagement has always been central to the development of SNOMED CT. In 2016, SNOMED International formally recognised the importance of clinical input, through the creation of a dedicated clinical engagement team and the agreement of clinical engagement strategy. The aim of the strategy is to provide a scalable approach to engaging with clinicians, and to ensure SNOMED CT has the input required to ensure it remains up to date and relevant to clinical practice. To provide a scalable approach for gaining clinical input from all clinical specialties, SNOMED International has put in place Clinical Reference Groups.

Analytics

- SNOMED CT concepts are modelled in such a way that their meaning can be represented using a formal family of logics called
- Description Logic (DL). Description logic enables computers to make inferences about the concepts in SNOMED CT and their meanings, and to classify SNOMED CT using a DL reasoner. Description logic also allows the formal computation of:
- Subsumption Testing pairs of expressions to see whether one is a subtype of the other
- Equivalence Testing pairs of expressions to see whether they have the same logic-based meaning
- Subsumption and equivalence are both extremely useful functions when retrieving or querying clinical information. For example, when retrieving all clinical records related to 73211009 [diabetes mellitus], it would usually be necessary to retrieve records referring to any subtype of this concept, such as 23045005 insulin dependent diabetes mellitus type 1A

SNOMED CT Course Catalogue E Learning

The SNOMED CT Course Catalogue offers education courses and certification exams for beginners through to advanced users of SNOMED CT.
